MTR bollard luminaires mark out entrance areas and order outside areas with their resplendent light. They are installed below or close to eye level in places where glare is undesirable, with appropriate anti-glare ensured by the MTR refractor technology. MTR prisms work according to the principle of light refraction – thereby guiding light precisely to wherever it is needed.

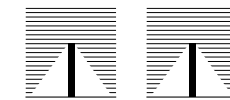

## MTR90/MTR200

die-cast aluminium · PMMA lenses · steel column without door · Selux Graphite or special finish

MTR refractor optics for optimum anti-glare comfort and precise direction of symmetric light

MTR 200 for installation on a plinth or separate buried base
